

## pfSense - Bug #7571

### openvpn client shortcut wrongly points to "server" configuration

05/20/2017 10:01 AM - Jeremy C. Reed

<b>Affected Version:</b>			

#### Description

vpn\_openvpn\_client.php has Related settings shortcut to vpn\_openvpn\_server.php but that is misleading and for normal pfSense use it is not "Related".

As an example, the server's page doesn't have a related settings shortcut pointing to clients (as it should not).

#### History

- Status changed from New to Rejected

That's a quirk of how the shortcut system works. The "related settings" link is filled in to the "main" page for a section. So if you're looking at OpenVPN, for example, it links you to the page that you'd get if you clicked VPN > OpenVPN. Which in this case is the server configuration.

Doesn't seem to be worth whatever extra coding would be required to fix just for one exception on one page.
