**Description**

vpn\_openvpn\_client.php  
Does the route\_no\_exec feature for "Don't add/remove routes" even work? I don't see any use of route-up script.

Also while here see the setHelp text shows "--route-upscript" which should have a space between up and script. This text is just verbatim from the man page (which has the space). (I also see missing space in the locale files.)

(I noticed this while working on my book.  
My list of bugs is at <http://reedmedia.net/books/pfsense/bugs.html> )

Yes, it works. route-noexec in OpenVPN tells it not to run the Operating System executable to install routes (e.g. /sbin/route). It does not matter that we do not set a route-up script. If you have route-noexec present then you *can* set a route-up script if you want, in advanced options.

I fixed the help text to be more explicit in stating this, but there is no bug here aside from the typo.
