pfSense - Bug #7951
WPA2 issue (KRACK)
10/16/2017 10:08 AM - Jim Pingle

Status: Resolved
Priority: Urgent
Assignee: Renato Botelho
Category: Wireless
Target version: 2.4.1
Affected Version: All

Description
We need to import the FreeBSD fixes for wpa_supplicant and hostapd related to the recently-disclosed key reinsertion flaw in the WPA2 protocol

#3 - 10/17/2017 07:08 AM - Renato Botelho
- Status changed from Confirmed to Feedback

Start using hostapd / wpa_supplicant from ports on 2.4.1 and 2.3.5. Next round of snapshots should be OK

#4 - 10/17/2017 12:27 PM - Jim Pingle
I've tested with ath0 and run0 as AP and BSS mode, both run the appropriate binaries from ports and appear to be OK.

#5 - 10/17/2017 03:37 PM - Jim Pingle
- Status changed from Feedback to Resolved

Looks good as far as I can see, with hostapd and wpa_supplicant are updated and running as expected.
