

pfSense - Bug #8177

"../xsl/package.xsl" is referenced in package XML files but not on the firewall

12/09/2017 06:58 PM - Harry Coin

Target version:		Affected Architecture:	
Affected Version:			
Description			

History

#1 - 12/09/2017 07:03 PM - Harry Coin

- File package.xsl added

Hit 'create' too soon by mistake. Anyhow:

cron.xml, arping.xml, shellcmd.xml, etc. etc. make reference to ../xsl/package.xsl which is nowhere to be found on at least 2.4.2.

The version I could find on git had a couple random </td> elements with no opening one. Attached is a cleaned up version. I don't know how out of date it is, but at least the routed package xml likes it now (after some out-of-order .xml elements were fixed)

#2 - 08/14/2019 09:56 AM - Jim Pingle

- Subject changed from "../xsl/package.xsl" referenced in to "../xsl/package.xsl" is referenced in package XML files but not on the firewall

- Category set to Package System
