Target version:	2.4.3	Affected Architecture:	
Affected Version:	2.4.2		

Description

After attempting to repair repos for a failed upgrade, config was exported from 2.3.4-P1 and imported to a fresh install of 2.4.2.

Console began spitting errors citing "/etc/inc/certs.inc line 44".

Cause was found to be 2.3.X Security Errata Only repo selected before config export.

```
"<pkg_repo_conf_path>/usr/local/share/pfSense/pkg/repos/pfSense-repo-legacy-23.conf</pkg_repo_conf_path>"
```

Setting repo to 2.4.X prevents the issue.
