

pfSense - Bug #8338

Wrong LDAP host is reported when testing system auth server settings

02/17/2018 05:33 AM - Phillip Davis

Status:	Resolved	Start date:	02/17/2018
Priority:	Normal	Due date:	
Assignee:	Phillip Davis	% Done:	100%
Category:	Web Interface	Estimated time:	0.00 hour
Target version:	2.4.3		
Affected Version:	2.4.x	Affected Architecture:	All

Description

To reproduce:

- 1) Add a few authentication servers (some Radius, at least 1 LDAP that is not the first entry in the list) in System/UserManager/Authentication Servers
- 2) In System/User Manager/Settings select an LDAP server that is not the first in the list
- 3) Press "Save and Test"

The host name/IP of the first auth server in the list is reported for the test, not the host name/IP of the selected server.
