<b>Target version:</b>	2.4.4		
<b>Affected Version:</b>	2.4.4	<b>Affected Architecture:</b>	All

#### Description

After switching to pfSense development snapshots I've noticed that the freeradius package has been producing some fatal errors when testing authentication.

#### Steps to replicate:

- Install the freeradius package on 2.4.4-DEVELOPMENT.
- Configure a freeradius server with a test user and local NAS.
- Add the RADIUS authentication server in System->User Manager->Authentication Servers.
- Try authentication by entering the test user's credentials on Diagnostics->Authentication with the RADIUS server selected.

The error produced is attached in the PHP\_errors.log file.

Thanks,  
James

#### History

##### #1 - 07/05/2018 11:19 AM - Jim Pingle

- Project changed from pfSense Packages to pfSense
- Subject changed from FreeRadius Error on Authentication to Error on RADIUS Authentication
- Category changed from FreeRADIUS to User manager
- Status changed from New to Feedback
- Assignee set to Renato Botelho

This is not specific to FreeRADIUS, but recent RADIUS changes. Renato has committed a fix.

##### #2 - 07/06/2018 07:37 AM - Jim Pingle

- Status changed from Feedback to Resolved

RADIUS auth works from diag\_authentication.php with the current code from the repository.
