Target version:			
Description			
There should be a solution to configure vlan-id's for ldap groups.			
Something like this: http://lists.freeradius.org/pipermail/freeradius-users/2011-July/054952.html			
Use case: use FreeRADIUS for dynamic vlan assignment to wifi clients in combination with openldap/Active Directory. Then use openLDAP group to assign all members a specify vlan.
