| Target version: | 2.4.4_2 | | |
| Affected Version: | 2.4.4_1 | Affected Architecture: | All |

Description

If a gateway existed but was deleted, the config can be left with <gateways></gateways> which leads to a PHP error in the setup wizard:

```
PHP Fatal error: Uncaught Error: Cannot iterate on string offsets by reference in /usr/local/www/wizard.php(1017) : eval()'d code:8
```

Stack trace:

```
#0 /usr/local/www/wizard.php(1017): eval()
```

```
#1 {main}
```

```
thrown in /usr/local/www/wizard.php(1017) : eval()'d code on line 8
```

This is ultimately from source:src/usr/local/www/wizards/setup_wizard.xml#L772 trying to iterate the gateways array that isn't properly set as an array in this specific case.

Note: This also only affects the wizard when setting a static WAN and upstream gateway.

Fix pushed, will show up momentarily.

#4 - 12/09/2018 12:50 AM - Constantine Kormashev

I checked the issue on latest 2.4.5-DEV and did not observe it. Gateways and their routes were successfully deleted and Wizard did not produce any errors.
