Add DNS support for Google domain to Acme manager

12/14/2018 08:21 PM - nivlek trahreg

Status:	New	Start date:	12/14/2018
Priority:	Normal	Due date:	
Assignee:	Jim Pingle	% Done:	0%
Category:	ACME	Estimated time:	0.00 hour
Target version:			
Description			
Please add DNS support of Acme manager for use with google domains. I'm using their DDNS feature and can't find them in the list of DNS methods for adding Acme certificate			

History

#1 - 12/14/2018 09:26 PM - Jim Pingle

- Category set to ACME

- Assignee set to Jim Pingle

The latest version of the acme.sh script (not the GUI package) has some support but it isn't like the other integrated scripts. It requires separate use of the gcloud CLI command (available via the net/google-cloud-sdk port) to setup credentials outside of the GUI. I'm not sure how viable it will be to add to the GUI, but I'll check into it.

#2 - 04/07/2019 02:23 AM - Matt D

Adding a request for this myself.

#3 - 04/21/2019 08:48 AM - Don McLean

I would also like to see Google Domains added into the list of supported validation methods.

#4 - 03/11/2020 10:13 PM - Jeremy 99

Google Domains currently does not have any API that allows DNS records to be managed programmatically, so no ACME clients can do "DNS Verification" with Google Domains until Google chooses to add that feature. The only options are to use "HTTP verification" or move your DNS to a different provider that supports ACME, such as Cloudflare.

#5 - 03/12/2020 01:33 PM - Manvir Randhawa

The question is how is certbot doing it using a plugin called dns-google

It is a python plugin
