<b>Target version:</b>			

#### Description

Let's add support for updating Linode DNS as a Dynamic DNS provider using their v4 REST API and Personal Access Tokens. This is straightforward but in order to be more user friendly does involve looking up some IDs for the domain and record in question.

<https://developers.linode.com/api/v4>

I already have this functioning but need to clean up code and test more before I can submit a PR.

#### History

#2 - 01/21/2019 11:49 AM - Tom Embt

FYI for anyone testing, and as noted on the PR:

Authentication uses [Personal Access Tokens](#) and NOT [API Keys](#)
