

pfSense - Bug #9411

Firewall log does not contain valid entries

03/18/2019 02:11 PM - Jim Pingle

Status:	Resolved	Start date:	03/18/2019
Priority:	Normal	Due date:	
Assignee:	Luiz Souza	% Done:	0%
Category:	Logging	Estimated time:	0.00 hour
Target version:	2.5.0		
Affected Version:	2.5.0	Affected Architecture:	All

Description

On 2.5.0 snapshots, the firewall log at /var/log/filter.log does not contain valid entries.

```
Mar 18 11:48:47 router filterlog[70359]: 4,,,1000000103,igb3,match,block,in,6,error='truncated-ip6
- 12038 bytes missing!',0x0a,0x50000,41,unknown,250,12038,c3b5:1828:6037:f498:a67f:17:6037:f498,:
:6002:a420:c855:0:204:550,
Mar 18 11:48:50 router filterlog[70359]: 4,,,1000000103,igb3,match,block,in,7,bad-hlen=4),7
Mar 18 11:49:15 router filterlog[70359]: 4,,,1000000103,igb3,match,block,in,6,truncated-ip6=36,
```

Looks as though it's having trouble interpreting the data from the pflog device.

History

- Assignee set to Luiz Souza

Luiz offered to look at this

#2 - 03/20/2019 12:23 PM - Luiz Souza

- Status changed from New to In Progress

#3 - 03/21/2019 10:16 AM - Jim Pingle

- Status changed from In Progress to Resolved

This looks good now. I tested on a variety of platforms, both CE and factory, amd64, SG-1000, SG-3100, SG-5100, and more.
