<b>Target version:</b>			
<b>Description</b>			
<p><a href="#">dnstap</a> support in Unbound would allow for query logging from pfSense with minimal performance impact. To implement a <a href="#">full (remote) query logging solution</a>, additional packages will be required, but turning on <b>--enable-dnstap</b> for the build is a prerequisite. Advanced administrators could then add additional binaries to their installation to generate dnstap-based remote query logging. At some time in the future, remote query logging packages and GUI could be added.</p> <p>dnstap support has been in Unbound for 5 years, <a href="#">since 1.5.0</a> and seen support and bugfixes over that time, despite the lack of documentation of the dnstap: clause in the <b>unbound.conf</b> manpage.</p>
